

## Kontrol Sports Eyewear

### “Aero “ range

Top Quality Sold in Europe & USA

UV 400 lens blocks 99.9% of harmful UVA & UVB rays.

1.7mm Polycarbonate lens 50x stronger than glass but 50x lighter, therefore safer for sports.

This is the toughest, most shatter resistant material commonly used for protective goggles lenses. This is the same material used for aircraft windshields! It is scratch resistant (though no lens is scratch proof and dont let advertisers try to tell you otherwise)

Super-Flex Grimalid Resin frame, highly durable & flexible, will flex to incredible degrees without breaking!

The incredible Grimalid flexibility lessens wind resistance in high speed sports such as skiing, cycling or motorcycling. Also 'moulds' to your head shape after time.

Grimalid resin is a very lightweight material, making these sunglasses much lighter than ordinary sunglasses.

Fits firmly but comfortably with ear & nose non slip soft, rubber grips, stays firmly put even during the most frenzied activity!

Ventilation airholes on top of the frame reduces fogging.

As Cycling Glasses these fit snugly under a cycle helmet and the narrow arms allow easy side under the helmet straps. With a good wrap around lens , side on sunstrikes are a thing of the past as well. In the unfortunate event of a knock or fall from a bike these glasses become your safety equipment for your eyes unlike all acrylic lens and frames.

Aero comes in 2 versions-  
Brown and Red

**Aero Brown** with amber Lens can improve both contrast and depth perception, reduce glare and is a good all-around choice if you live in an area with changeable weather patterns.

Brown Amber lenses offer high contrast necessary in high-speed, high altitude sports such as skiing by filtering out blue light which makes focusing difficult. Blue light is in higher concentrations at high altitude and is commonly found in diffused light such as one might experience on a cloudy day.

Brownish tint lens helps highlight the different contrasts in green colors .

Retains true-color perception. Jet black frame with micro glitter flecks within, smoke lenses.

A very light and comfortable frame that 'moulds' to your own head shape after time.
