

Kontrol Sports Eyewear

“Aero “ range

Top Quality Sold in Europe & USA

UV 400 lens blocks 99.9% of harmful UVA & UVB rays.

1.7mm Polycarbonate lens 50x stronger than glass but 50x lighter, therefore safer for sports.

This is the toughest, most shatter resistant material commonly used for protective goggles lenses. This is the same material used for aircraft windshields! It is scratch resistant (though no lens is scratch proof and dont let advertisers try to tell you otherwise)
Super-Flex Grimalid Resin frame, highly durable & flexible, will flex to incredible degrees without breaking!

The incredible Grimalid flexibility lessens wind resistance in high speed sports such as skiing, cycling or motorcycling. Also 'moulds' to your head shape after time.

Grimalid resin is a very lightweight material, making these sunglasses much lighter than ordinary sunglasses.

Fits firmly but comfortably with ear & nose non slip soft, rubber grips, stays firmly put even during the most frenzied activity!
Ventilation airholes on top of the frame reduces fogging.

As Cycling Glasses these fit snugly under a cycle helmet and the narrow arms allow easy side under the helmet straps. With a good wrap around lens , side on sunstrikes are a thing of the past as well. In the unfortunate event of a knock or fall from a bike these glasses become your safety equipment for your eyes unlike all acrylic lens and frames.

Aero comes in 2 versions-
Brown and Red

Aero Red with Cherry Red Frame and Smoke Lens colour, transmits all colours evenly without changing value of colour. Light enough not to impair vision, yet dark enough to provide overall protection from glare. Excellent for bright sunny days. Smoke lens is best for bright light situations like water sports because it blocks out the brightest of the suns rays.

A very light and comfortable frame that 'moulds' to your own head shape after time.
