

Kontrol Sports Eyewear **“Gel Shock “ range**

Top Quality Sold in Europe & USA

UV 400 lens blocks 99.9% of harmful UVA & UVB rays.

1.7mm Polycarbonate lens 50x stronger than glass but 50x lighter, therefore safer for sports.

This is the toughest, most shatter resistant material commonly used for protective goggles lenses. This is the same material used for aircraft windshields! It is scratch resistant (though no lens is scratch proof and don't let advertisers try to tell you otherwise)

Super-Flex Grimalid Resin frame, highly durable & flexible, will flex to incredible degrees without breaking!

The incredible Grimalid flexibility lessens wind resistance in high speed sports such as skiing, cycling or motorcycling. Also 'moulds' to your head shape after time.

Grimalid resin is a very lightweight material, making these sunglasses much lighter than ordinary sunglasses.

Fits firmly but comfortably with ear & nose non slip soft, rubber grips, stays firmly put even during the most frenzied activity!

Ventilation airholes on top of the frame reduces fogging.

Ideal golf frame - regular sunglasses interfere with a golf swing, these sunglasses have no bottom frame so don't interfere with your line of sight.

As Cycling Glasses these fit snugly under a cycle helmet and the narrow arms allow easy side under the helmet straps. With a good wrap around lens, side on sunstrikes are a thing of the past as well. In the unfortunate event of a knock or fall from a bike these glasses become your safety equipment for your eyes unlike all acrylic lens and frames.

Gel Shock comes in 6 versions- Amber, Clear, Yellow, Blue, Mini Blue and SP (which has a frame around the Lens)

Smoke Lens with Blue Flash Mirror Tint

Smoke color lens, 'coolest' most relaxing color on the eyes.

Gray or smoke colored lenses are best suited for driving or general use when true color perception is important. Best for sunny conditions.

Smoke lens has flash mirror tint (flash tints reflect back in certain angle or lighting conditions, one moment you see the flash tint, the next you don't) Colour changes from blue to purple depending on which angle the light hits it. Cuts out glare in highly reflective surfaces and keeps your eyes hidden

SuperFlex Grimalid Resin frame.....

Also available for The Gel shock range is an additional Prescription lens adapter that fits snugly into the frame and allows the wearer to keep their eyesight clear with the prescription but safe with the Gelshock comfort and durability along with sporting style.
