

Kontrol Sports Eyewear

“Moondog II “ range

Top Quality Sold in Europe & USA.

Super-Flex Grimalid frame is highly flexible & very tough to break.

Flexibility of frame lessens wind resistance, in high speed sports such as skiing, cycling & motorcycle sports.

This revolutionary new grimalid resin makes these sunglasses much lighter than your average pair of sunglasses! Plus it 'molds' to your own head shape after time.

UV 400 lens blocks 99.9% of harmful UVA & UVB rays.

1.7mm Polycarbonate lens 50x stronger than glass but 50x lighter, therefore safer for sports. This is the toughest, most shatter resistant material commonly used for protective goggles lenses. This is the same material used for aircraft windshields! It is scratch resistant (though no lens is scratch proof and dont let advertisers try to tell you otherwise)

Fits firmly but comfortably with ear & nose non slip soft, rubber grips, stays firmly put even during the most frenzied activity!

Ideal Golf Frame - regular sunglasses interfere with a golf swing, these sunglasses have no bottom frame so don't interfere with your line of sight.

As Cycling Glasses these fit snugly under a cycle helmet and the narrow arms allow easy side under the helmet straps. With a good wrap around lens , side on sunstrikes are a thing of the past as well. In the unfortunate event of a knock or fall from a bike these glasses become your safety equipment for your eyes unlike all acrylic lens and frames.

MoonDog II comes in 3 versions- Clear , Sunset and Cobalt

Cobalt Translucent smokey blue/grey frame. Smoke color lens, 'coolest' relaxing color on the eyes.

Gray or smoke coloured lenses are best suited for driving or general use when true colour perception is important.

Also available for The Moondog range is an additional Prescription lens adapter that fits snugly into the frame and allows the wearer to keep their eyesight clear with the prescription but safe with the Gelshock comfort and durability
