

Kontrol Sports Eyewear “Stratos “ Model

Top Quality Sold in Europe & USA
Combined TR90 Grymalide and Brushed Aluminium frame is very flexible & tough to break.

Flexibility of frame lessens wind resistance, in high speed sports such as skiing, cycling & motorcycle sports.

This revolutionary new Grymalide resin is used on the frame arms and combined with an aluminium frame for the lenses makes these sunglasses much lighter than your average pair of sunglasses! Plus it 'moulds' to your own head shape after time.

UV 400 lens blocks 99.9% of harmful UVA & UVB rays.

1.7mm Polycarbonate lens 50x stronger than glass but 50x lighter, safer for sports. This is the toughest, most shatter resistant material commonly used for protective goggles lenses.

This is the same material used for aircraft windshields! It is scratch resistant (though no lens is scratch proof and don't let advertisers try to tell you otherwise)

Fits firmly but comfortably with non slip soft, rubber ear grips, stays firmly put even during the most frenzied activity!

Aluminium colour arms with blue ear grips.

The **Stratos** has a strong multi coloured flash blue mirror coating that helps reduce glare.

Improves road visibility in intense heat and wet road situations. An ideal lens to use for fishing to cut through surface glare on the water.

Flash mirror one way mirror blue tint coating on lens reduces glare, discreet one way mirror effect in certain lighting angles. Keeps your eyes hidden from view.
